Surge and Spring Control scenarios show what may occur if we reduce transmission rates by 25% or down to levels seen earlier this spring, respectively. The "Fall" scenarios add the potential impact of cooler weather and the holidays.

Delta has shown that the unvaccinated population remains large enough to allow additional surges. As the Delta variant continues to spread, Charlottesville, VA will see another peak, with cases reaching 582 per week during the week ending October 17, 2021.

*Model estimates only, not actual cases. For actual case counts visit <https://www.vdh.virginia.gov/coronavirus/>.
 *Cases are calculated by week, so "today," "so far," or any specific date refers to the week end date (Sunday) of the week in which the relevant date falls.
 **Estimates are created for the Virginia portion of Metro areas only.

Mitigation Strategies We Have Employed

- **VACCINATIONS**
- **Protocols for families and schools**
- **Air Quality**
- **PPE Supplies**
- **Extra Cleaning**
- **Spacing in classes and buses**
- **Testing**
- **ETC, ETC**

Next Steps--Continue With Current, Updated Plans Plus Testing

ViSSTA Testing...Pooled Testing

We have:

Surveyed Families/Staff

Met with Vendor (Molecular Next)

Finalized MOU

Securing Resources Identified

Just About Ready to Go!

Diagnostic Testing

We have:

Received 1032 test kits and received logistical information

Next:

We will train nurses, distribute kits to school to use for students/staff with symptoms or exposures as close contact to hopefully avoid sending someone home to quarantine.

Vaccinations

Approximately 95% of staff is vaccinated.

Next steps:

Continuing to vaccinate students 12+ and staff

Scheduling Pfizer boosters for employees

Will work with BRHD for continued vaccinations when Moderna/J&J boosters are available and have already talked about vaccination sites for 5-11.
